

Figure 1 is a false-color image of the field around the star HD 167619. The image shows a complex nebula with various colors (blue, red, orange, yellow, green, and black) representing different wavelengths. A red circle with a crosshair marks the position of the star. A compass rose in the upper right corner indicates North (N) and East (E). The axes are labeled 'Arc Seconds' and range from -30 to 30.
