

Figure 1 is a false-color image of the galaxy cluster Abell 1835. The image shows a complex distribution of galaxies, with a prominent yellowish-white galaxy at the bottom right. A red dashed line outlines a region of interest, and a red solid line outlines a larger region. A red crosshair marks a specific location. A red arrow points to a bright blue/white galaxy, labeled 'N' for North and 'E' for East. The axes are labeled 'Arc Seconds' and range from -30 to 30.
