

Figure 1 is a false-color image of the galaxy cluster Abell 1835. The image shows a dense field of galaxies, with bright white and yellow galaxies and fainter red galaxies. A yellow dashed line outlines the cluster boundary. A yellow dotted line outlines the region of interest. A red cross marks the position of the central galaxy. A red dashed line outlines the region of interest. A red solid line outlines the region of interest. The axes are labeled 'Arc Seconds' and range from -30 to 30.
