

Figure 1 is a grayscale image of the radio continuum emission from the galaxy NGC 4414. The image shows a complex structure with several bright, dark regions. Red and green contours are overlaid on the image, indicating the 100 mJy and 300 mJy flux density levels, respectively. The contours are solid for the 100 mJy level and dashed for the 300 mJy level. A small crosshair marks the position of the primary radio source. A scale bar in the bottom right corner indicates 10 arcseconds. The axes are labeled 'Arc Seconds' and range from -30 to 30.
