

Figure 1 shows a grayscale image of the NGC 1333 region, overlaid with a grid of Right Ascension (RA) and Declination (Dec). The RA axis ranges from 17h 46m 30s to 00h 00m 00s, and the Dec axis ranges from -29° 15' to -28° 55'. Red crosses mark the positions of 100 stars, many of which are labeled with their IDs. The stars are concentrated in a central cluster, with some outliers further away. The grid lines are dashed blue lines. The axes are labeled 'RIGHT ASCENSION' and 'DECLINATION'.
