

Figure 1 is a grayscale image of a star field, likely from a deep-sky survey. The image is overlaid with a grid of red crosses, each marking a specific star. The axes are labeled 'DECLINATION' (vertical, from -11°20' to -10°55') and 'RIGHT ASCENSION' (horizontal, from 18h29m15s to 30s). The stars are numbered in red, indicating their positions in the field. The background shows a dense distribution of stars, with some brighter stars appearing as larger, more prominent crosses.
