

A false-color astronomical image of the star-forming region NGC 6334. The image shows a dense field of stars and interstellar dust. A bright, cyan-colored star is located in the upper left. A bright, red star is in the upper right, with orange arrows pointing North (N) and East (E). A bright, white star is in the center, circled in red with a red crosshair. The axes are labeled 'Arc Seconds' and range from -30 to 30.
