

Figure 1 is a grayscale astronomical image of the NGC 3690 field. The image is overlaid with a grid of dashed blue lines representing Right Ascension (RA) and Declination (Dec). The RA axis at the bottom is labeled from 05h 46m to 05h 41m, and the Dec axis on the left is labeled from -68° 35' to -68° 10'. Numerous red crosses mark the positions of 380 identified sources, many of which are labeled with their respective IDs. The background shows a complex distribution of galaxies and other celestial objects, with some brighter regions appearing as darker patches in the grayscale image.
