

Figure 1 is a grayscale image of the NGC 2442 field, showing a distribution of galaxies. A grid of Right Ascension (RA) and Declination (Dec) is overlaid. The RA axis is labeled 'RIGHT ASCENSION' and ranges from 05h 40m 0s to 37m 30s. The Dec axis is labeled 'DECLINATION' and ranges from -43° 55' to -44° 20'. Red crosses mark 28 identified sources, many of which are labeled with numbers. A central cluster of sources is highlighted with a darker, irregular gray region. The grid lines are dashed blue.
