

Figure 1 is a false-color image showing the field of view of the Wide-Field-of-View Imager (WFOI) on the International Space Station. The image displays a dark background with various celestial objects. A red circle highlights a bright, white, irregularly shaped object (the International Space Station) near the center. A red crosshair is centered on this object. In the upper right, a red arrow points towards a bright, red, irregularly shaped object (the Sun). The axes are labeled 'Arc Seconds' and range from -30 to 30.
