

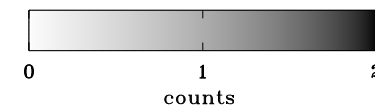

Figure 1 is a grayscale astronomical image showing the NGC 6052 field. The image is overlaid with a grid of red crosses, each representing the position of a star. The crosses are labeled with numbers, indicating the star's ID. The axes are labeled: the horizontal axis is 'RIGHT ASCENSION' (ranging from 05h 09m to 04h) and the vertical axis is 'DECLINATION' (ranging from -68° 30' to -68° 05'). The background shows a dense field of stars, with the NGC 6052 cluster being the most prominent feature.
