

Figure 1 is a false-color image of the star-forming region NGC 6334. The image displays a dense field of stars and interstellar dust. A red circle with a crosshair marks the position of the protostar IRAS 16293-2422. Orange arrows in the upper right indicate the North (N) and East (E) directions. The axes are labeled 'Arc Seconds' and range from -30 to 30.
