

Figure 1 is a grayscale astronomical image showing the M31 galaxy field. The image is overlaid with a grid of red crosses, each representing an identified source. The crosses are labeled with numbers, indicating the count of sources in that specific region. The axes are labeled 'DECLINATION' (vertical axis, ranging from 51°50' to 52°00') and 'RIGHT ASCENSION' (horizontal axis, ranging from 14h 15m 30s to 12m 30s). The background shows the faint, diffuse structure of the M31 galaxy, with brighter regions indicating higher density of stars or other celestial objects.
