

This figure is a deep-field astronomical image of a galaxy cluster, likely the Virgo Cluster, showing numerous galaxies of various sizes and colors (blue, yellow, red) against a dark background. The image is plotted on a coordinate system with 'Arc Seconds' on both the horizontal and vertical axes, ranging from -30 to 30. A red circle with a central crosshair marks a specific location at approximately (0, 0) arc seconds. In the upper right corner, there is a small red arrow pointing towards the top right, labeled 'N' for North, and a red 'E' for East. A large, bright, yellowish-white galaxy is visible in the lower left quadrant, centered around (-25, -25) arc seconds.
