

Figure 1 is a false-color image of the central region of the M31 galaxy. The image shows a dense field of stars and interstellar dust. A red solid line outlines the boundary of the field of view. A red dashed line outlines the boundary of the region used for the analysis. A red cross marks the position of the central star. A red arrow points to the position of the central star. The axes are labeled 'Arc Seconds' and range from -30 to 30.
