

A false-color astronomical image of the galaxy cluster Abell 1835. The central region is dominated by a bright, yellowish-white galaxy. Surrounding it are numerous other galaxies, some appearing blue and others red, indicating different spectral types or distances. A red crosshair marks the center of the cluster. A dashed yellow line outlines the cluster boundary. A red arrow points to the 'E' (East) direction, and a red 'N' indicates North. The axes are labeled 'Arc Seconds' from -30 to 30.
